

Week of 8/27/12

Crew Leader: Kyle Jaquis
Divers: Doug Russo & Luke Dumas
40Hrs

The crew began the week with a swim from Bungalow Bay into Pelky Bay finding 120 plants, predominantly in the Southwest side of Pelky Bay. They then moved to Markham Point and the North Basin, removing 12 plants from Markham and 45 in the North Basin. Goose Island, surprisingly only has 2 plants and Green Island and Green Bay had 1 and 2 plants respectively.

The crew then swam the North and West sides of Little Square Bay removing 1 bag of plants that had been initially located by Guy. They did a cursory swim of the tongue in Little Square to check up on it and found only 20 plants and reported it to be looking well under control. They then went to the bay Northeast of Buck Island finding 150 small, new growth plants.

The crew then swam Pork Bay finding only 145 plants near the littoral dropoff and in the existing Bassweed. They continued down the East side of the Narrows finding 126 plants mostly at the very northern and southern points of the Narrows. The small bay Southeast of the Narrows only had 6 plants.

They swam the South Basin next heading into the bay just Northeast of there, finding 300 plants all small, new growth. The crew then moved to the channel behind Buck Island and removed 85 plants. They finished the week in Back Bay pulling 5 plants.

Total Invasive plants removed: 2 bags

50 pounds
